Task Dependency Network Diagram

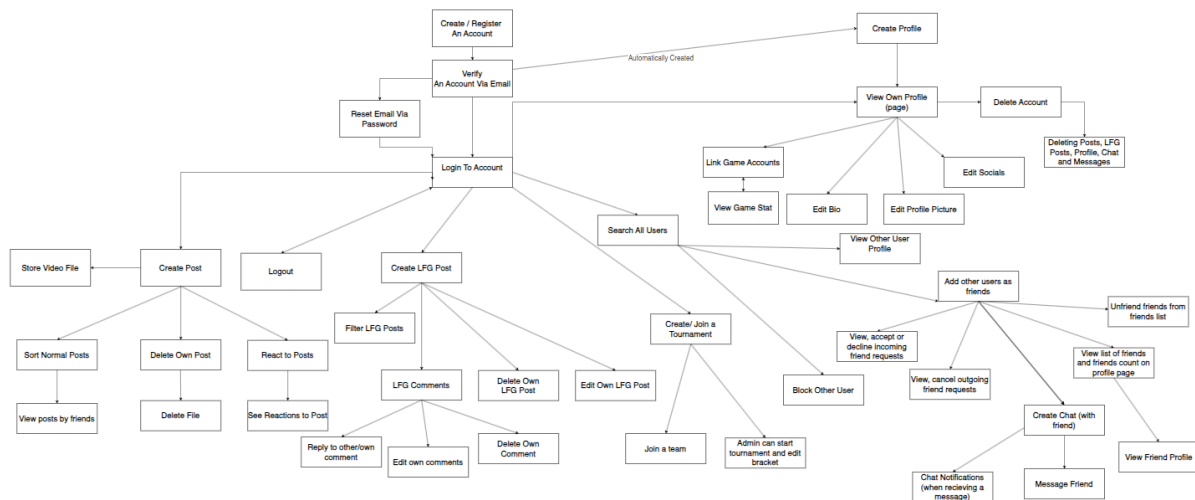

Diagram Explanation

We have finished our entire backlog

New features from this sprint:

- Viewing Other Profiles
- Blocking Other Users
- Chat Notification
- Reset Password
- View a List of Users
- Viewing Game Stats
- Create Tournament
- View Friend Profile

Ensuring Timely Completion

As we did in previous sprints, to stay on schedule, we attempted to finish off all the features and play to our team members' strengths. Although quizzes 4 and a2

definitely did slow us down, we were able to finish all the stories in our backlog.

Critical Path

We don't really have a critical path this time as the entire backlog is complete and no other stories remain. Although functionally, due to how the app is setup the critical path would be:

Create/Register An Account → Verify Account → Reset Password → Login To Account → Search All Users → Add Friend → Create Chat → Message Other User → Get Notification
